About the series
At health care stores1 commonly raised is a value-based provider delivery system, which goals are attended to cost containment and improving the clinical outcomes and improving the patient experience. We believe that care providers and consumers do not need to be at odds.

W

essioned post-care care is a process that can be streamlined to help connect the patient while improving care and improving outcomes. The goal is to transition to a more patient-centered care model, which improves the patient experience and improves outcomes. This is important because it is estimated that about one-third of health care costs are wasted on inefficiencies, duplication of services, and unnecessary tests. By focusing on patient-centered care, we can improve the overall health of our population and reduce costs.

Building an ID bridge with post-acute providers
BY JOHN MORRISSEY

As health care moves closer to a value-based provider delivery system, which goals are attended to cost containment and improving the clinical outcomes and improving the patient experience. We believe that care providers and consumers do not need to be at odds.
